Activity 4

Noor is learning about how users interact with a range of computing devices.

Complete an analysis of user interaction by listing three potential issues for each device. Write your answers below.

Remember, a range of issues have already been identified:

- Cooling vents on the device could be blocked when it is on the user's lap.
- Resting the device on the user's lap could be uncomfortable.
- Lack of support for the user's wrists when using the keyboard or trackpad.
- Device can be heavy or uncomfortable to hold using one hand.
- Device does not stand without support from a user or case.
- Position of the screen is often lower than the user's eye line.
- Device can be difficult to hold using one hand.
- Device is not designed to stand on a work surface.
- Device can distract the user or prevent them from doing other tasks.

Device	Potential issues
Laptop	
Tablet	
Smart phone
