

### UNIT 3. REPRODUCTION

#### MALE REPRODUCTIVE SYSTEM

1. Match the male reproductive organs to the descriptions.

|                                     |   |   |                                                                                   |
|-------------------------------------|---|---|-----------------------------------------------------------------------------------|
| testicles                           | ● | ● | These produce and store millions of sperm sex cells.                              |
| penis                               | ● | ● | This contains the urethra, a long tube through which sperm travel out of the body |
| scrotum                             | ● | ● | Two tubes that carry sperm toward the penis.                                      |
| vas deferens                        | ● | ● | A bag of skin that surrounds the two testicles.                                   |
| prostate gland and seminal vesicles | ● | ● | These produce semen, a liquid which helps sperm move and gives them nutrients.    |

2. Label the diagram of the male reproductive system.

scrotum    prostate gland    seminal vesicles    urethra    testicles

penis    vas deferens
