Noor is learning about making improvements to computing devices.

Create a sketch to show possible improvements to a **tablet** based on the analysis of user interaction.

Remember, a range of issues have already been identified:

- Device can be heavy or uncomfortable to hold using one hand.
- Device does not stand without support from a user or case.
- Position of the screen is often lower than the user's eye line.
- Device can easily be damaged if dropped during transport.

Explain the improvements included in your sketch of a tablet.
Write your answer below.
