

Meridians and parallels

1. Choose the correct word to complete the information about meridians and parallels

We use **meridians** and **parallels** to talk about the of places on Earth

Parallels are lines around the Earth. They measure (distance from the). We measure latitude in $^{\circ}$ (degrees) The **equator** is latitude..

Meridians are lines that go from the North pole to the South pole

They measure (distance East or West)

The most important meridian is the meridian. This is 0° . All the other meridians measure $^{\circ}$
