

Retest Assignment for Waves and Energy assessment

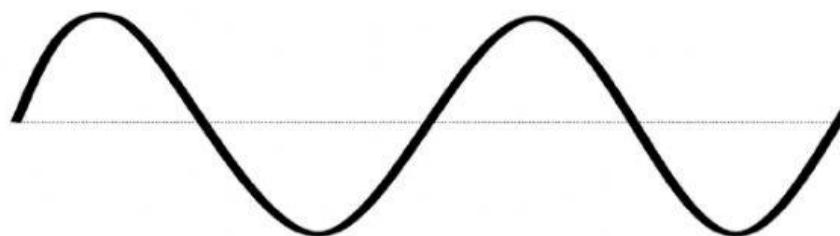

Refer to the following wave to answer the questions.

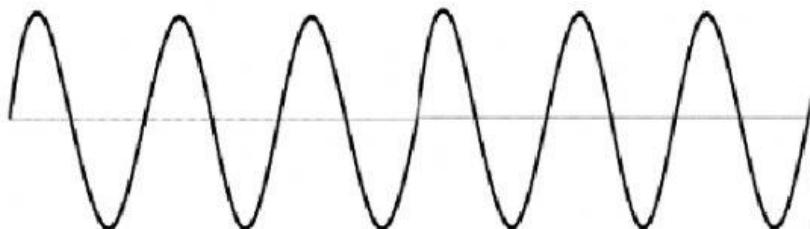

Which of the following waves has:

- 1-a frequency twice that of the initial wave?
- 2-a wavelength twice that of the initial wave?
- 3-an amplitude half that of the initial wave?

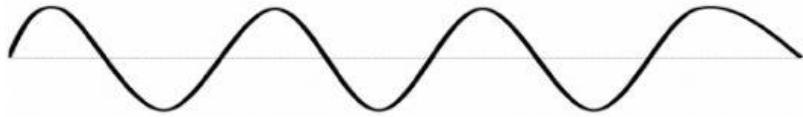

A

B

C

Which of the waves above has:

4-the lowest pitch?

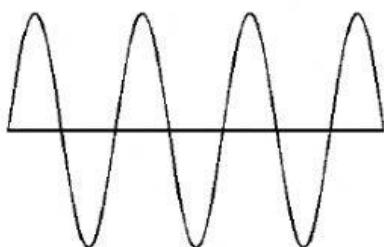

5- the highest pitch?

6-the lowest volume?

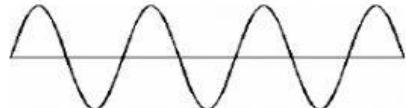

Scenario- two people are attending a baseball game. One person is sitting behind home plate and the other is sitting behind the outfield fence.

7-Which sound wave best represents the sound the person behind home plate will hear when the batter hits the ball?

D

E

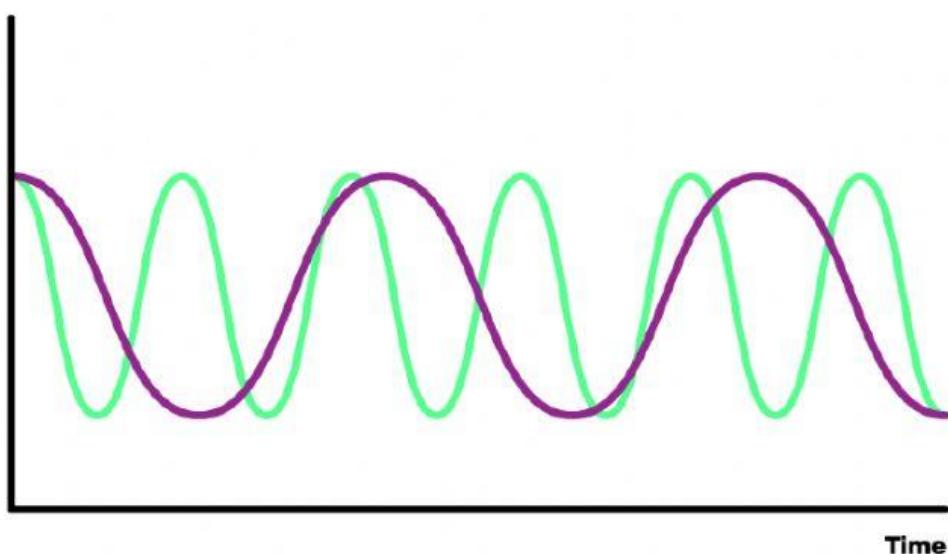

8-Will the pitch of the sound from the bat hitting the ball be different or similar for both people?

Refer to the green/purple sound waves graphed below.

9-Which wave will have a lower pitch?

10-Which wave will have a higher pitch?

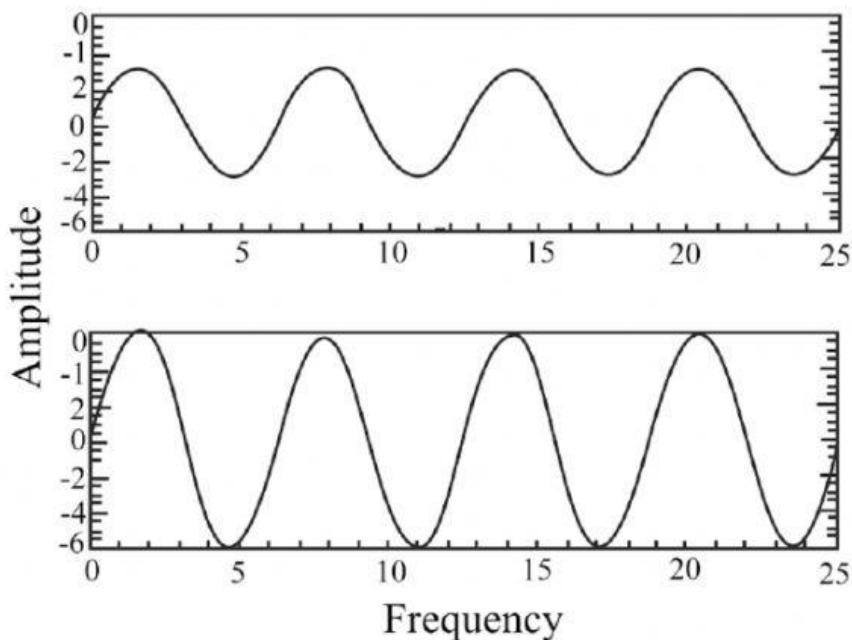

Refer to the Amplitude/Frequency graph below.

11- Which of the following sound waves will have a higher volume?

12- A lower volume?

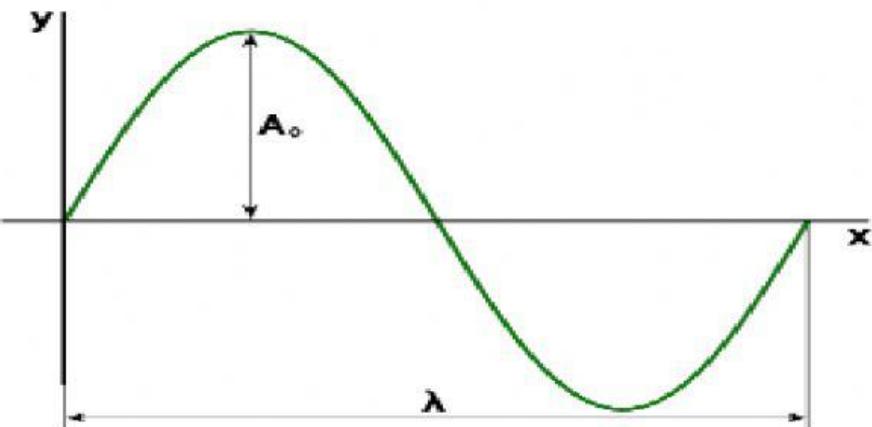

F

G

Label the parts of the wave by dragging the name to the correct box.

Crest   Trough      Wavelength    Amplitude

17- When you increase the amplitude of a wave, the \_\_\_\_\_ also increases.

18- When you increase the frequency of a wave, the \_\_\_\_\_ also increases.

19- When you increase the wavelength of a wave, the frequency and pitch go \_\_\_\_\_.

20- Sound waves travel fastest through what medium?
