Activity 12

Abdulla is learning about the internet of things in computer systems.

Explain what internet of things is and how it works.

Use the words to fill in the blank spaces.

collect	exchange	hardware	internet	software

Internet of things is a platform where we connect everyday things embedded with electronics, software, and sensors to the internet enabling it to ..... and ..... data.

Any IoT system will have a ..... and software. Hardware (devices and sensors) will collect data. Using the ....., it will exchange and send data to the software. The ..... will show the information as an output on mobile phone, computer screens.
