

1 Which Venn diagram does NOT accurately show relationships among quadrilaterals?

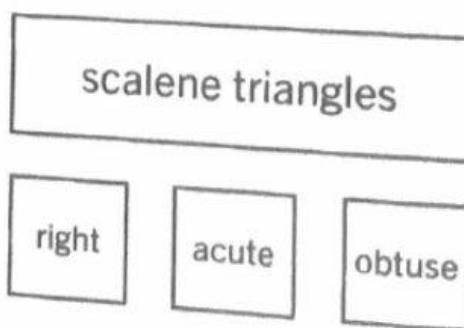

2 Ruth creates a table to classify shapes based on their angles.

Exactly 1 Right Angle	Exactly 1 Obtuse Angle	All Acute Angles
1	3	5
2	4	6

Which shapes appear to be classified correctly?

F Shapes 1 and 6 only
G Shapes 5 and 6 only
H Shapes 1, 2, 4, and 6 only
J Shapes 2, 3, 5, and 6 only

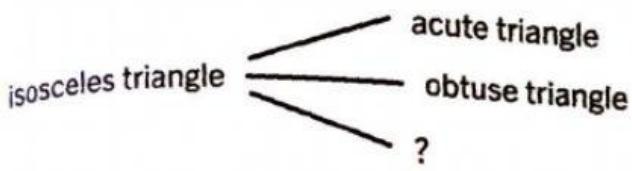

3 Andy begins a diagram to show types of scalene triangles.

Which types of triangles should Andy connect with *scalene triangles*?

A Right and obtuse only
B Right and acute only
C Acute and obtuse only
D Right, acute, and obtuse

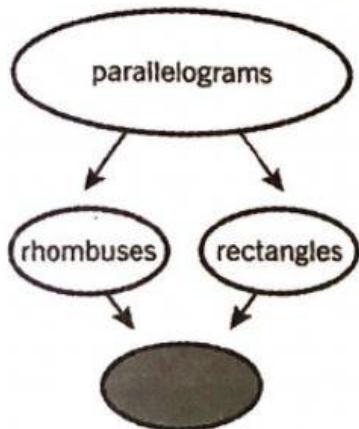

1 Heather builds a diagram to show relationships among triangles. Here is a section of her diagram.

Which is the missing term in Heather's diagram?

- A Regular triangle
- B Right triangle
- C Isosceles triangle
- D Equilateral triangle

2 The graphic organizer shows relationships among groups of special parallelograms.

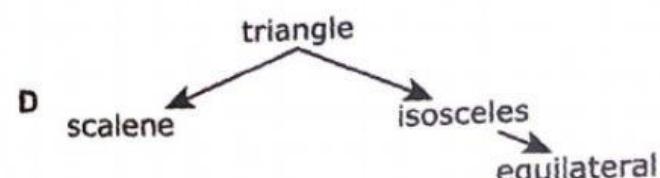

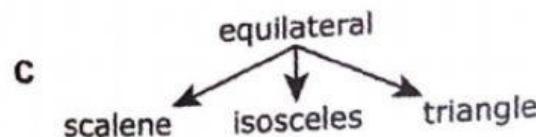

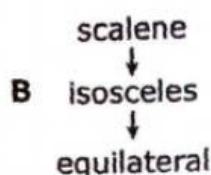

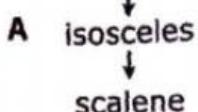

Which term belongs in the shaded oval?

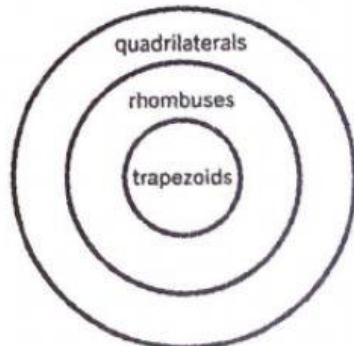

- F Squares
- G Trapezoids
- H Rectangular prisms
- J Quadrilaterals

3 Brett creates 4 diagrams to show the relationships among triangles. Which diagram best organizes triangles by their properties?

equilateral

4 What is the error in this diagram?

- F Trapezoids are not quadrilaterals.
- G Rhombuses are not quadrilaterals.
- H Trapezoids are not rhombuses.
- J All rhombuses are rectangles.
