

Newton laws worksheet 13

Watch this video on breaking gravitational force into components before you continue

Breaking gravitational force up into components

The gravitational force on an object resting on a slope acts straight down.

However, since the object isn't going to fall straight down, and break the ramp, it is not useful to calculate that force.

We then break gravitational force up into 2 components – called $F_{g\parallel}$ and $F_{g\perp}$

The $F_{g\parallel}$ is the force of gravity that is trying to pull the box down the slope, and acts parallel to the slope, thus $F_{g\parallel}$

The $F_{g\perp}$ is the force of gravity that is trying to pull the box down onto the slope and acts perpendicular to the slope.

We can draw a triangle of this

If we look at alternate angles then the angle of 35° is at the top of the above triangle
 Now we just need to use trig to solve for the triangle

$$F_g = m \cdot g$$

$$= 20(9,8)$$

$$= 196 \text{ N}$$

Soh Cah Toa

$$\sin \theta = \frac{o}{h}$$

$$\sin 30 = \frac{F_{g||}}{196}$$

Cross multiply

$$F_{g||} = (196) \sin 30$$

$$= 98 \text{ N}$$

$$\cos \theta = \frac{a}{h}$$

$$\cos 30 = \frac{F_{g\perp}}{196}$$

$$F_{g\parallel} = (196) \cos 30$$

$$= 169,74 \text{ N}$$

But honestly we don't need to draw the triangle every time that we want to solve for the $F_{g\parallel}$ and $F_{g\perp}$

If you can remember this then you can just use this

$$F_{g\parallel} = F_g \cdot \sin \Theta$$

$$F_{g\perp} = F_g \cdot \cos \Theta$$

Θ will always be this angle

Exercise 11

Calculate the force of gravity on the box, parallel and perpendicular to the slope {ignore the 8m length) No direction necessary

11.1

$$F_{g\parallel} = \underline{\hspace{2cm}}$$

$$F_{g\perp} = \underline{\hspace{2cm}}$$

11.2

$F_{g\parallel} =$ _____

$F_{g\perp} =$ _____

11.3

$F_{g\parallel} =$ _____

$F_{g\perp} =$ _____

11.4

$F_{g\parallel} =$ _____

$F_{g\perp} =$ _____

11.5

$F_{g\parallel} =$ _____

$F_{g\perp} =$ _____

11.6

$F_{g\parallel} =$ _____

$F_{g\perp} =$ _____

Exercise 12

Calculate the unknown side, as well as the indicated angle in each of the following triangles.

12.1

Side =

$\theta =$ °

12.2

Side =

$\theta =$ °

12.3

Side =

$\theta =$ °

12.4

Side =

$\theta =$ °

12.5

Side =

θ = °
