SEPARATING MIXTURES

Evaporation

Evaporation separates homogeneous mixtures. For example, salt and water:

- Leave the mixture in a shallow dish.
- The water evaporates.
- The salt stays in the dish.

Filtration

Filtration separates heterogeneous mixtures. For example, sand and water:

- Pour the mixture into a filter.
- The water passes through the filter.
- The sand stays in the filter.

EXPERIMENT TIME!!

Watch the video and do the experiment at home. Then send us photos and complete the next documents.
