III. READING (5.0 pts)

Part 1. Read the following passage and circle the most suitable answer (A,B,C or D) for each space: (2.0 points - 0.2/each)

What do you do well? What do you enjoy doing? Your answers to these two questions will help you identify your (71)_____. An employer will consider you seriously for a (72)_____ when you can show them that you know who you are, what you can offer and which you have studied. Sometimes it is difficult to know what your weaknesses are. Clearly not everyone is equally good (73)_____ everything. You may need to improve yourself and so (74)_____ courses in that field could turn a weakness into strength.

You will need to (75)_____ some time on your self-assessment. Your honesty and the desire for self-improvement will lead to (76)_____ in getting the right job. Explore the following seven areas to start to get to know yourself: your aptitude, your skills, your personality, the level of responsibility you feel comfortable with, your interests and your needs.

Ask (77)_____ if you have any special talents and if you need to consider your physical health when choosing a job. Be as honest and realistic as you can, and ask for other people's (78)_____ if necessary. Make a list of these things. It is usually a good idea to talk about your aptitudes with teachers, family and friends.

If you are considering a career that (79)_____ a special talent, such as art, acrobatics, mathematics or music, discuss your aptitudes with (80)_____ expert in that area and discover how they fit the needs of the occupation.

71. A. strong	B. strength	C. strengthen	D. strengthened
72. A. position	B. location	C. spot	D. room
73. A. upon	B. in	C. at	D. for
74. A. meeting	B. taking	C. making	D. interviewing
75. A. use	B. make	C. lose	D. spend
76. A. success	B. successful	C. successfully	D. succeed
77. A. you	B. your	C. yours	D. yourself
78. A. interests	B. fields	C. opinions	D. attendances
79. A. requires	B. asks	C. tells	D. urges
80. A. a	B. an	C. the	D. this

Part 2. Read the passage and circle the letter A, B, C or D to indicate the correct answer to each of the questions: (2.0 points - 0.2/each)

Question 1. Read the following passage and choose the best answer A, B, C or D for each question. Write your answers in the space provided. (10p.)

We are descendants of the ice age. Periods of glaciation have spanned the whole of human existence for the past 2 million years. The rapid melting of the continental glaciers at the end of the last ice age spurred one of the most dramatic climate changes in the history of the planet. During this interglacial time, people were caught up in a cataclysm of human accomplishment, including the development of agriculture and animal husbandry. Over the past few thousand years, the Earth's climate has been extraordinarily **beneficial**, and humans have prospered exceedingly well under a benign atmosphere.

Ice ages have dramatically affected life on Earth almost from the very beginning. It is even possible that life itself significantly changed the climate. All living organisms pull carbon dioxide out of the atmosphere and eventually store it in sedimentary rocks within the Earth's crust. If too much carbon dioxide is lost, too much heat escapes out into the atmosphere. This can cause the Earth to cool enough for glacial ice to spread across the land.

In general the reduction of the level of carbon dioxide in the atmosphere has been equalized by the input of carbon dioxide from such events as volcanic eruptions. Man, however, is upsetting the equation by burning fossil fuels and destroying tropical rain forests, both of which release stored carbon dioxide. **This** energizes the greenhouse effect and causes the Earth to warm. If the warming is significant enough, the polar ice caps eventually melt.

The polar ice caps drive the atmospheric and oceanic circulation systems. Should the ice caps melt, warm tropical waters could circle the globe and make this a very warm, **inhospitable** planet.

Over the past century, the global sea level has apparently risen upwards of 6 inches, mainly because of the melting of glacial ice. If present warming trends continue, the seas could rise as much as 6 feet by the next century. This could flood coastal cities and fertile river deltas, where half the human population lives. Delicate wetlands, where many marine species breed, also would be reclaimed by the sea. In addition, more frequent and severe storms would batter coastal areas, adding to the disaster of the higher seas.

The continued melting of the great ice sheets in polar regions could cause **massive** amounts of ice to crash into the ocean. This would further raise the sea level and release more ice, which could more than double the area of sea ice and increase correspondingly the amount of sunlight reflected back into space. The cycle would then be complete as this could cause global temperatures to drop enough to initiate another ice age.

81. According to the passage, carbon dioxide is stored in each of the following **EXCEPT**

A. polar ice caps. B. sedimentary rocks. C. rain forests. D. fossil fuel.

82. What does the final paragraph of the passage mainly discuss?

A. The relationship between the ocean and the sun
B. The amount of sunlight reflected into space
C. A rise in global temperatures
D. The conditions that could lead to an ice age

83. Which of the following does the author **NOT** mention as a consequence of a large rise in global sea level?

A. The destruction of wetlands B. The flooding of cities
C. A more diverse marine population D. Severe storms

84. According to the passage, what is the relationship between carbon dioxide and the Earth's climate?

A. Carbon dioxide, which is trapped in glacial ice, is released when warm temperatures cause the ice melt.
B. The greenhouse effect, which leads to the warming of the climate, is result of too much carbon stored in the Earth's crust.
C. Rain causes carbon dioxide to be washed out of the atmosphere and into the ocean.
D. An increase in atmospheric carbon dioxide results in the warming of the climate.

85. The word **beneficial** in the first paragraph is closest in meaning to
A. calm B. inviting C. thoughtful D. favorable

86. The word **massive** can be replaced to
A. wide B. huge C. dense D. thick

87. It can be inferred from the passage that the development of agriculture
A. preceded the development of animal husbandry.
B. withstood vast changes in the Earth's climate.
C. did not take place during an ice age.
D. was unaffected by the greenhouse effect.

88. The word “**this**” in the third paragraph refers to
A. man's upsetting the equation B. the reduction of the level of carbon dioxide.
C. a volcanic eruption D. the melting of the polar ice caps

89. The word “**inhospitable**” is closest in meaning to
A. imperfect. B. uninhabitable. C. unlikable D. cruel.

90. What is the main topic of the passage?
A. The possibility that the popular ice caps will melt
B. The coming of another ice age
C. Man's effect on the carbon dioxide level in the atmosphere
D. The climate of the Earth over the years

Part 3. Match each of the following headings with its suitable paragraph. The first one (0: H) as an example has been done for you. There are two extra headings which you do not need to use. Write your answers in the space provided. ((1.0 points - 0.2/each))

A. Research holds the key to success	B. New and improved techniques
C. A new kind of athlete	D. New equipment has made a difference
E. Athletes are what they eat	F. Personalized programs will help
G. The influence of drugs	H. Is there a limit to record-breaking?

[0: H]

A world record is every athlete's dream, but the hard-won records of a few years ago are mostly just today's qualifying times. Roger Bannister's famous four-minute mile of 1956 has been beaten by nearly 15 seconds, while almost an hour and twenty minutes has been taken off the women's marathon since 1953. 'Faster, higher, stronger' is the Olympic motto, and today's competitors continue to push back the boundaries of what the body can achieve. But one wonders if this can continue.

[1: _____]

The last forty years have seen many important technological advances. For example, since the introduction of strong, flexible fiberglass poles, over a meter has been added to the pole vault record. There have also been important developments in the design the running shoe. And while a shoe won't actually make someone run faster, modern shoes do mean many more miles of comfortable, injury-free training.

[2: _____]

Pushing back the limits now depends more on science, technology and medicine than anything else. Athletic technique, training programs and diets are all being studied to find ways of taking a few more seconds off or adding a few more cm to that elusive world record. It seems that natural ability and hard work are no longer enough.

[3: _____]

The search to find more efficient ways of moving goes on. Analysis of an athlete's style is particularly useful for events like jumping and throwing. Studies show that long jumpers need to concentrate not on the speed of approach, as once thought, but on the angle their bodies make with the ground as they take off. However, the rules governing each sport limit advances achieved by new styles. For instance only one-footed takeoffs are allowed in the high jump.

[4: _____]

In the future, it should be possible to develop a more individual approach to training programs. Athletes will keep detailed diaries and collect data to help predict the point when training becomes overtraining, the cause of many injuries. If athletes feed all the information into a database, it may then be possible to predict patterns and to advise them individually when they should cut down.

[5: _____]

Combining the right diet with a training program is vital. Athletes are continually searching for that special 'go-faster' ingredient, but apparently it's still a battle to get them to drink sufficient liquid and to follow a balanced healthy diet throughout all phases of training, competition and recovery. Diet in the period after an event is particularly important and often neglected. An athlete who doesn't replace all the liquid lost immediately after a hard run won't be able to repeat the performance at the same level 24 hours later.

Your answers

91.	92.	93.	94.	95.
-----	-----	-----	-----	-----

III. WRITING (5.0 POINTS)

Part 1: Rewrite each of the sentences using the given word so that the new one has a similar meaning as the given one. You must not change the given word. (2 points- 0.2/ each)
