

b boa constrictor

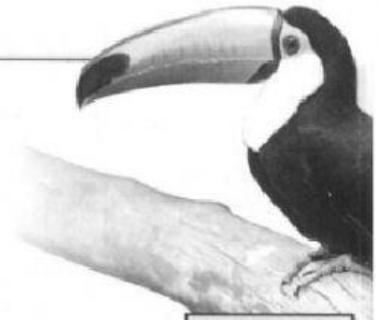

a harpy eagle

1 This animal lives in the canopy of the rainforest. It's mainly a fruit-eater, although it sometimes likes to catch a lizard or snake from the forest floor. It's got a big yellow and brown sharp bill (similar to a beak) that it uses to pick and throw fruit. —

c pygmy glider

d toucan

- 2** This little animal lives in the giant trees and the canopy of the rainforest. It eats insects and fruit as well as pollen. It is about the size of a mouse. It has a brown, black and white tummy and a very long, thin, feathery tail. —
- 3** This long animal lives in the understory of the rainforest. It is a great hunter and likes to surprise its prey. It eats birds, frogs, lizards and rodents. It is very strong and it has circular and oval-shaped brown patterns on its body. —
- 4** This animal lives in the emergent trees of the rainforest. It has a pale, grey head, black outer feathers and white under feathers. It likes to eat monkeys and sloths. —

Read the sentences and **circle** true (T) or false (F).
