

The first vaccine was created in 1796. It was against smallpox, which had killed a lot of people before 1796. Since then, vaccines have millions of people from serious diseases like polio, and measles, and most recently Covid-19. No one can forget year 2020 and 2021 when thousands of people were killed by Covid-19, and now, with Covid-19 vaccines, we can live normally with the of it.

Besides, Vaccines boost our They train it, let it some practices so that it can be ready to the diseases. Some vaccines are very and can life-long immunity, so with one or two shots of them, you can be safely protected from diseases.

Moreover, vaccines help us save a lot of money. With them, diseases are prevented, so we don't have to spend a lot of money on hospitals, doctors, and other medical needs. Without vaccines, these deases would huge cost for both the government, and individuals.

Lastly, vaccines are safe. To develop a vaccine, physicians have to study the virus carefully, and test it on animals or even on humans before it is ready to use. Vaccination causes no Also, people are advised to receive a vaccine only when they are in good health conditions, then the side effect of its is almost none.

However, a of parents reject vaccine, and refuse to vaccinate their children. There are some reasons for that.

Firstly, they are afraid of the side effects of vaccines. Vaccines are not 100% safe; they may cause tiredness, nausea, or even deaths when the viruses in the vaccines back and cause the disease. Even though the number of deaths caused by vaccines is very low, it still makes parents scared.

Secondly, a lot of parents believe in rumours about vaccines. Some of them believe that vaccines can cause autism; others think vaccines their children. Even worse, vaccines are rumoured to our bodies together with some spy chips and steal our information. Nobody know where these rumours are from, but it is clear that because of them, the rate of vaccination in children is in many countries.
