

SUMA Y RESTA DE FRACCIONES CON IGUAL DENOMINADOR

Para **sumar fracciones** que tienen igual denominador, se suman los numeradores y se deja el mismo denominador.

$$\frac{3}{5} + \frac{1}{5} = \frac{4}{5}$$

Para **restar fracciones** que tienen igual denominador, se restan los numeradores y se deja el mismo denominador.

$$\frac{5}{6} - \frac{4}{6} = \frac{1}{6}$$

Efectúa las siguientes sumas:

$$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

Efectúa las siguientes restas:

$$\frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{3}{5} + \frac{1}{5} = \frac{\quad}{\quad}$$

$$\frac{8}{8} - \frac{7}{8} = \frac{\quad}{\quad}$$

$$\frac{4}{9} + \frac{5}{9} = \frac{\quad}{\quad}$$

$$\frac{6}{6} - \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{5}{7} - \frac{2}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{1}{4} = \frac{\quad}{\quad}$$
