

Reproduction of angiosperms

03

COMPLETE WITH THE CORRECT WORD

_____ is when pollen from the stamen is transferred into the stigma.

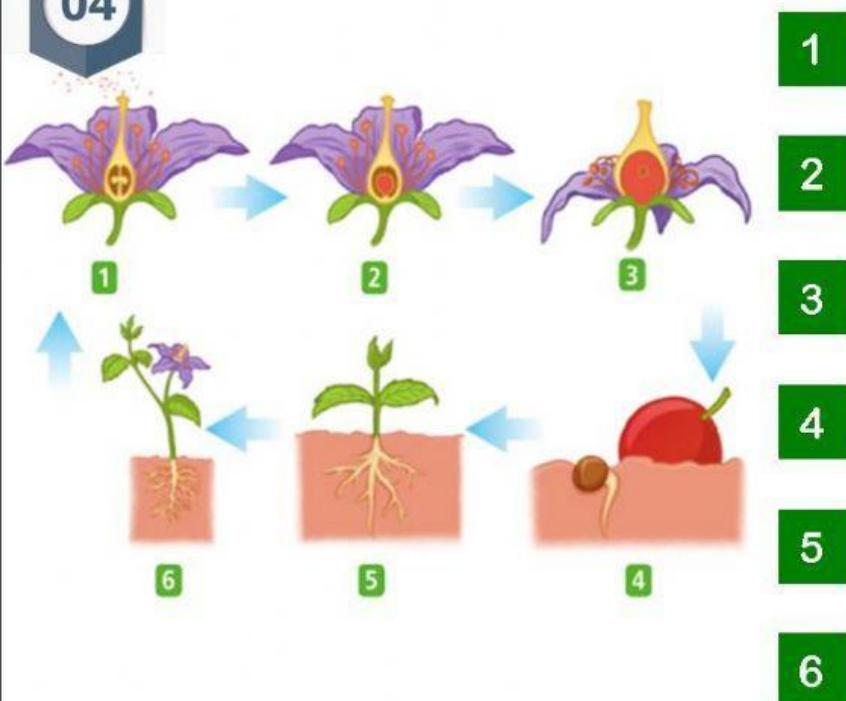

The _____ are the male reproductive organs.

_____ protect the flower before it opens.
_____ can be a variety of colours.

When the _____ joins the ovules in the ovary, fertilisation occurs.

04

LOOK, READ AND PUT IN ORDER

A seed develops inside the ovary.

1

The seeds can germinate and new plants grow.

2

Pollen goes into the stigma down to the ovary.

3

4

5

6

The new plant produces flowers.

The fruit falls, opens and releases the seeds.

The ovary then grows into a fruit with seeds.
