NUTRITION REVIEW

1. Listen and match the main organs of the human body.

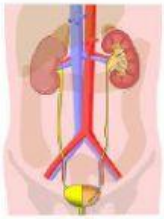

STOMACH	LARGE INTESTINE	EAR	LIVER
SMALL INTESTINE	LUNGS	EYE	HEART
PANCREAS	BRAIN	KIDNEYS	

2. Choose the correct body system.

3. Read and match the body system to the corresponding function.

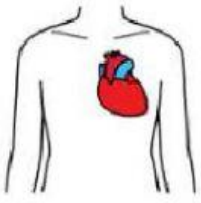

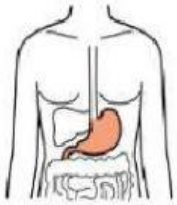

The digestive system helps us **break down food into nutrients.**
The respiratory system helps us **breathe**. We breathe **in oxygen** and breathe **out carbon dioxide.**
The circulatory system **moves the blood** through the heart and around the body in the arteries and veins. Blood gives our body **nutrients and oxygen**.
The excretory system helps us **eliminate waste products** from our body.

4. Match the organs and systems.

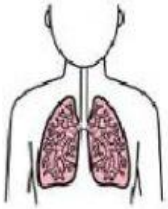

THE RESPIRATORY SYSTEM	THE EXCRETORY SYSTEM	THE DIGESTIVE SYSTEM	THE CIRCULATORY SYSTEM

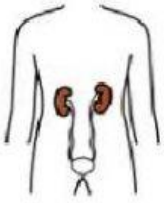

HEART

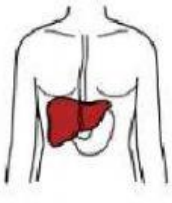

STOMACH

LUNGS

KIDNEYS

LIVER
