

## DIVISION (Using Sharing Method)

Division means to share, to divide, to split to put into equal groups or sets.

### Using sharing

$$12 \div 3 = 4$$

Dividend total number of objects	Divisor number of equal groups	Quotient number in each group
---	---	-------------------------------------

Drag and drop the objects to create groups to help you divide.

Use the numbering.

1.  $8 \div 2 = \square$

--	--

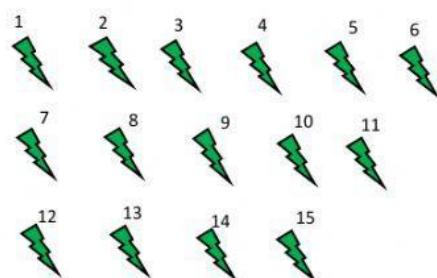

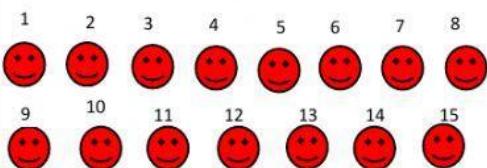

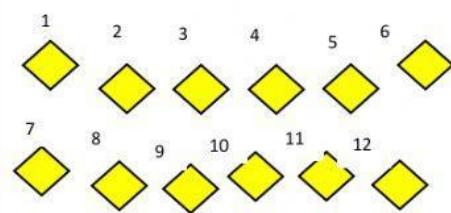

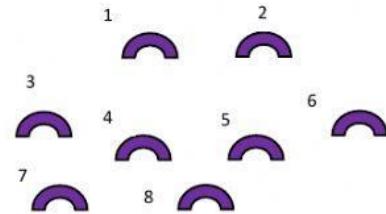

2.  $12 \div 3 = \square$

--	--	--

3.  $15 \div 3 = \square$

--	--	--

5.  $15 \div 5 = \square$

Complete each division number sentence. Use the numbering to drag and drop the objects to show the grouping.

4. James has 14 beads. He shares them equally between his 2 friends. How many beads did each friend get?

$$\boxed{\quad} \div \boxed{\quad} = \boxed{\quad}$$

5. Shavel has 12 sweets. She shares them equally among her 4 friends. How many sweets did each friend get?

$$\boxed{\quad} \div \boxed{\quad} = \boxed{\quad}$$

6. Allec has 9 pencils. He puts the same number of pencils into 3 pencil cases. How many pencils did he put in each pencil case?

$$\boxed{\quad} \div \boxed{\quad} = \boxed{\quad}$$

7. Rasheik caught 16 fishes. He divides them equally into 4 baskets. How many fishes did he put in each basket?

$$\boxed{\quad} \div \boxed{\quad} = \boxed{\quad}$$
