

1. Reading Part 6

Glass

Glass is a hard material that can be made in (1) shapes. It is usually transparent, but it can (2) be made in colours. Glass is mainly made of silica and sand is the (3) common example. Glass used to make windows and bottles is made (4) a specific type called soda-lime glass. Coloured glass is made (5) adding small amounts of metal oxides. Crystal glass is not actually a crystal because (6) glass is a non-crystalline solid.

Electricity

Can you imagine a world (1) we don't have electricity. That would (2) no light switches to turn on, no computers to turn on, no hot water and no heating. Electricity is a big part (3) our lives, and sometimes we don't even realize it. First, let's take a look (4) what electricity is. Electricity comes (5) power stations, the wind, the sun, and water. It is a type of energy that can flow from (6) place to another.
