Organelles

1. Large spherical organelle that controls what happens in a cell.
2. The substance that flows inside the cells and supports all other organelles.
3. The sac for storing food and water.
4. A small sac that breaks down food and turns it into energy.
5. Thin outer layer which lets substances in and out of the cell.
6. Organelle that turns sunlight into energy.
7. Hard out layer of a plant cell.
8. The chemical that makes plants green.
