

1. Identify the type of stress in each case.

1.

2.

3.

4.

5.

6.

7.

8.

9.

10.

11.

12.

13.

14.

15.

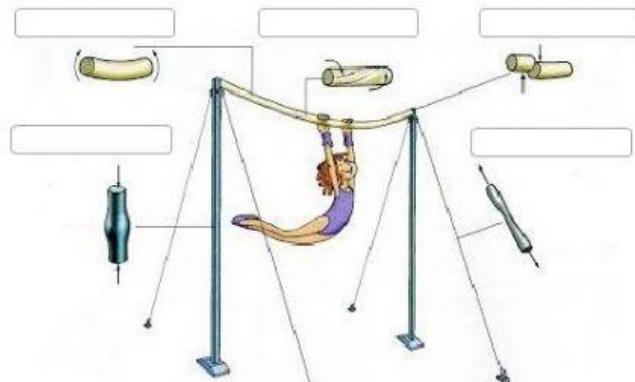

16.

17.

18.

2. Drop the stress in the correct place.

Tension

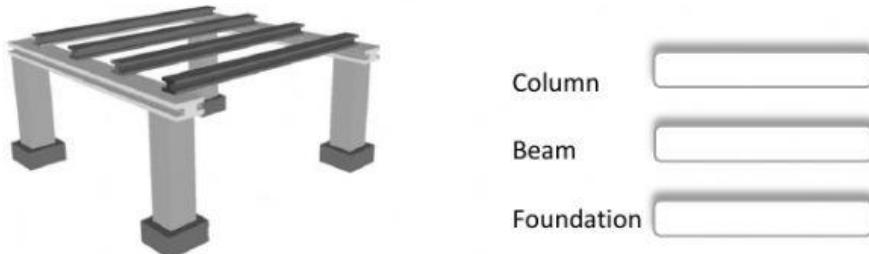

Bending

Torsion

Compression

Shear

3. Select the stress that these three elements support in this structure.

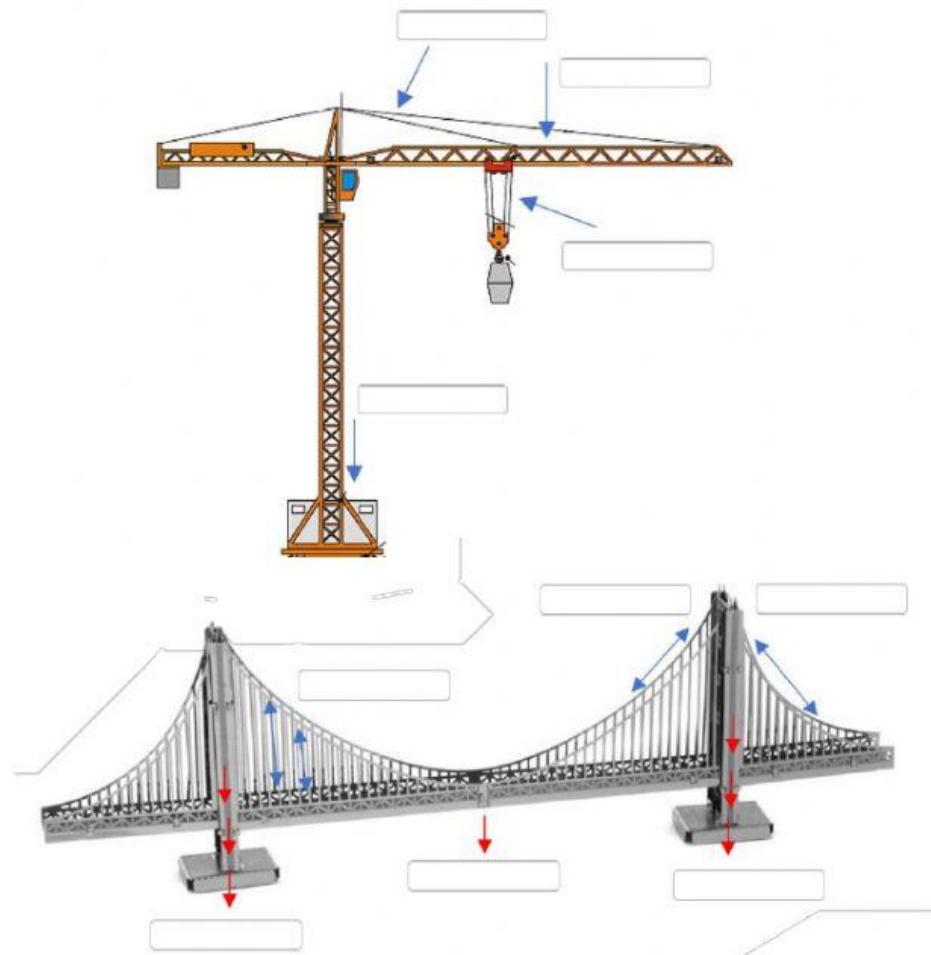

Column

Beam

Foundation

4. Indicates which stress are involved in the following structures:

5. Join the word with the definition.

Compression	This is caused by forces acting on a body that tend to stretch it.
Bending	This is caused by two equal forces applied in opposite directions that tend to cut it.
Tension	This is caused by forces acting on a body that make it twist.
Torsion	This is caused by forces acting on a body that tend to shorten the object.
Shear	This is caused by forces acting on an element that make it curve or bend
