

Ask people about their favourite toys and quite a few will mention Lego. However, some children don't abandon Lego when they grow up. Take James May, whose idea to build a life-size Lego house received so much public interest that, in July 2009, he started construction.

Over 1,000 volunteers helped make the bricks, each one consisting of 272 Lego pieces, and put the two-storey house together. Apart from a 'safety frame' made out of steel, the rest of the structure was made entirely from Lego, including a staircase, a shower and a toilet! May even stayed overnight in the house, though he found it far from comfortable on the Lego bed!

Initially, the Lego house was a huge success, but problems arose when the landowners where the house was built needed their land back. At first, Legoland, a theme park in Berkshire, planned to relocate the house to its new site, but the deal fell through because of the transport costs involved.

Despite further efforts to find a private collector to take it, the house was eventually sold and its 3.3 million pieces were donated to charity. Nevertheless, the Lego house was a significant architectural achievement for those involved in its construction.

Ask people about their favourite toys and quite a few will choose Lego. However, some children don't abandon Lego when they grow up. Take James May, whose idea to build a life-size Lego house received so much public interest that, in July 2009, he started construction.

Over 1,000 volunteers helped make the house, each one contributing a part consisting of 272 Lego pieces, and put the two-storey house together. Apart from a 'safety frame' made out of wood, the rest of the house was made entirely from Lego, including a staircase, a kitchen and a toilet! May even stayed overnight in the house, though he found it far from comfortable on the Lego bed!
