

Amazing Animals Project: Tropical Rainforests 2- Monkeys and Frogs

A Fill in the blanks with the correct word. Drag and Drop!

Argentina	can	dance	day	intelligent	leaves	long	sometimes
-----------	-----	-------	-----	-------------	--------	------	-----------

Monkeys are mammals and there are 260 species. Many of them have (1) _____ tails and live in trees. The capuchin monkey lives in Central and South America, including (2) _____. It is small, white and brown. It sleeps in trees at night and looks for food in the (3) _____. It eats flowers, fruit, wood, (4) _____, and worms. It lives in family groups of 10-35 monkeys. It (5) _____ use rocks like hammers to open nuts. It **can** be trained to do many things because it is very (6) _____. It is good at climbing and it can (7) _____. There are capuchins in movies and T.V. shows. The monkey in Pirates of the Caribbean is one of them! Girl capuchins (8) _____ throw rocks at boy capuchins. It means "I like you".

B. Write the questions for each answer. Questions start with Where do, What do, Can, Do, and When do.

	Capuchin Monkeys live in Central and South America.
	Capuchin Monkeys eat flowers, fruit, wood, leaves, and worms
	Yes, capuchins can dance.
	Yes, capuchins live in groups.
	Capuchins sleep at night.

C. Monkey Records. Who's the best? Add -est and fill in the blanks. (Spelling! hot-hottest, happy-happiest)

	1. Are Capuchins the _____ monkeys? (funny)
	2. Orangutans are the _____ monkeys and apes. (smart)
	3. The Pygmy Marmoset, from Brazil, is the _____ monkey. It is smaller than your hand! (small)
	4. The Mandrill, from Africa, is the _____ monkey. It is bigger than a baboon! (big)
	5. The Patas Monkey, from Africa is the _____ primate on Earth. It runs up to 55 kilometres per hour. (fast)

D. Amphibians- Read the text and Write complete answers for each question:

	<p>Amphibians are a very interesting type of animal because they live on land and in water. Amphibians need to have wet skin, so they need wet places. They lay their eggs in water. Young frogs are called tadpoles. They look like small fish and they have no legs. Young frogs breathe underwater with their gills. Adult frogs don't have gills. Frogs are a type of amphibian. Most amphibians, like frogs, have legs that help them walk and jump on land. Frogs are carnivores, so they eat insects like flies and mosquitoes. Nobody knows when frogs sleep because most of the time they have their eyes closed!!</p>
