The Solar System

Watch the video and complete the information about the planets of our Solar system

We call it the Solar System because it is centred around the ……

The Sun

The sun is a ……

…….. Earths would fit inside the sun

Without the sun there would be no …… or ……

Mercury

Mercury is the …… planet in the Solar System

Mercury has a …… surface with craters on it. It is similar to the surface of the ……

It has no …… and no …… to breathe

Venus

Some people call Venus Earth's ..... because they have similar ..... and .....

Venus is the ..... planet in the Solar System

Venus' thick atmosphere is made of ....

Earth

Earth is the only planet to have .... (that we know!)

Mars

Mars is called the ..... planet

Mars is ..... than Venus and Earth but larger than .....

Scientists think that maybe humans could ..... on Mars

Right now there are two special ..... exploring the surface of Mars

Mars has two .....

Mars' moons are not big and round. They are ..... and .....

Jupiter

Jupiter is called a ..... giant

Jupiter has a lot of ..... orbiting it

Peope cannot land on Jupiter because it is made of .....

Jupiter has a lot of very strong .....

Saturn

Saturn is famous for its beautiful .....

Saturn has more than ..... moons orbiting around it

Uranus

Uranus is much …… than Saturn and Jupiter

Uranus has …… moons

Uranus is covered in blue ……

Neptune

Neptune is dark …… in colour

Neptune takes more than …… …… to go around the sun. It has the longest …… of all the planets in the Solar System.
