

If the Yahoo no longer exists it is because humans have encroached on its home, taken their food and driven them to extinction. Cut out and place the levels of extinction in order and decide which level you think the Yahoo is at.

The species no longer exist.

The species is extinct in its natural habitat. Individuals still exist in captivity (such as in a zoo) or cultivation (such as in a botanic garden)

Extremely high risk of extinction in the wild.

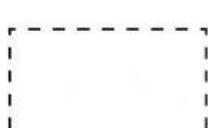

Very high risk of extinction in the wild.

High risk of extinction in the wild.

At risk of extinction if the population continues to decline.

The population is abundant and not under threat.

Critically Endangered Least Concerned Near Threatened Extinct Extinct in the Wild Endangered Vulnerable
