

The human skull

Video and fill in exercise

Watch the video and **fill in** the gaps. **Drag and drop** the words in the right space. The text has been divided into paragraphs to facilitate the task

surround – brain - 14 - support for – exception - articulate - sutures - made up
-8- structure - joints -

The human skull isofcranial bones that
.....and protect the andfacial bones that form the
underlyingof the face andthe teeth. With the
.....of the mandible, the bones of the skullwith each
other throughknown as.....

nerves - throughout - holes - blood - zygomatic

.....the skullknown as foramina, serve as passageways for
..... vessels and.....

bones – encase- sensory –these - occipital - temporal - frontal – nasal

.....on the surface of the skullthe brain, protect
..... organs and serve as attachment sites for the muscles of the head and
neck.

.....bones include thebone, parietal bones, bones and the bone as well as thebones, the bones, the maxilla and the mandible.

features – houses - more - inside - gland - (butterfly-shaped) - body - wings – orbit - sphenoid – anterior

Other bones become visible only when looking the skull. The bone makes up thebase of the cranium. It is abone with a central and two pair of laterally projecting wings. These form portions of the The body of the sphenoid a depression known as the sella turcica whichthe pituitary

portion - located - cavity - ethmoid – olfactory- septum - project - through – cranial

..... between the orbits, the ethmoid bone makes up aof thefloor and also the roof of the nasal An inferior projection, the perpendicular plate of the bone, forms part of the nasal The crista gallisuperiorly from the ethmoid bone and serves as the attachment point for the falx cerebri, a dural fold. Extending laterally from the crista galli is the cribriform plate, a perforated area which the nerves pass.

cavity - thin - palatine - hard - make up - each - orbit - lacrimal - nasal - allows

The two L-shaped bones form the posterior third of the palate, part of the nasal..... and a portion of theThe small, lacrimal bonethe anterior portion of the medial wall oforbit. A groove, known as the groove, helps to form the lacrimal canal which contains a duct that tears to travel to the nasal cavity.

posterior – (plough-shaped) – septum

The vomer is an elongatedbone that forms the inferior andpart of the nasal.....

structure - suited to - articulate – external

The internal andskull bonesprecisely forming an intricate perfectly its functions.
