

Go Green!

The green economy goal is to reduce environmental risks and ecological **shortages**, and aims for **sustainable** development without **harming** the environment. We could say that it is a lifestyle, and everyday more and more people are supporting it. However, it takes some time to adjust to this habit and in the meanwhile tons of **garbage** are produced every day. 1)

If you choose to go green you will be contributing to your planet and to its inhabitants because going green has lots of benefits! For example, using bicycles reduces air **pollutants**. 2)

Reducing **waste** helps the environment by **decreasing** the amount of material that ends up in landfills, where they can biodegrade and release carbon dioxide which contributes to the **greenhouse gas effect**. 3)

Also, a company that **increases** energy efficiency saves on utility costs and by reusing existing material in creative ways means that fewer money is spent to invest in new stock to create products. 4)

For all the above reasons, we should go as green as possible to save our planet.

Choose the option that best suits

- a) Therefore, if companies decide to go green, they will enjoy all the positive effects that it has on business as well as an improved brand reputation.
- b) For this reason, encouraging people to go green and recycle as often as possible, reuse items in an effort to reduce waste is essential to reduce their consumption
- c) It also reduces noise pollution and congestion as well as the need for new parking lots and roadways.
- d) As a result, the environment remains in danger and with it, all the creatures that live on it.
