

Hello, good morning to everybody!

Today we are going to see the page 55.

We already know about the geometric figures (triangle, square, rectangle, circle...) and the types of colours (warmy and cool colours).

Look at this page and try to analyse this portrait. As you can see, there are a lot of shapes.

Now you have to continue the patterns with the same colours.

When you finish doing this, at the back, you are going to create your own drawing using all the types of shapes and colours that you know. For example, you can draw a big rainbow using the same technique that in the picture of "Portrait of Félix Fénéon" by Paul Signac, or maybe, if you prefer you can invent one. It's up to you!

See you soon. Bye, bye.
