Natural Resources

Natural resources are found in nature and can be used by people.

light

water

animals

plants

air

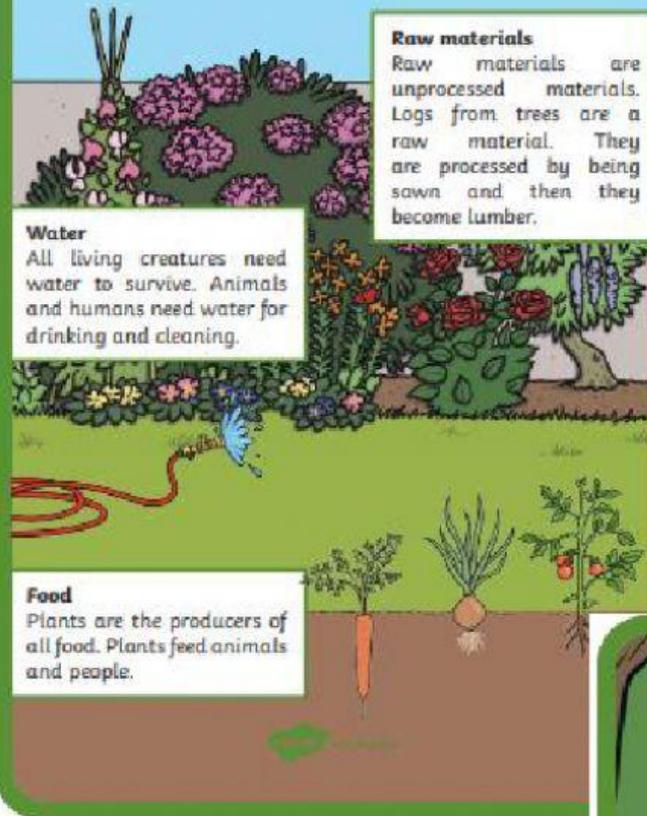

minerals

fossil fuels

stone

soil

Natural Resources

Raw materials

Raw materials are unprocessed materials. Logs from trees are a raw material. They are processed by being sawn and then they become lumber.

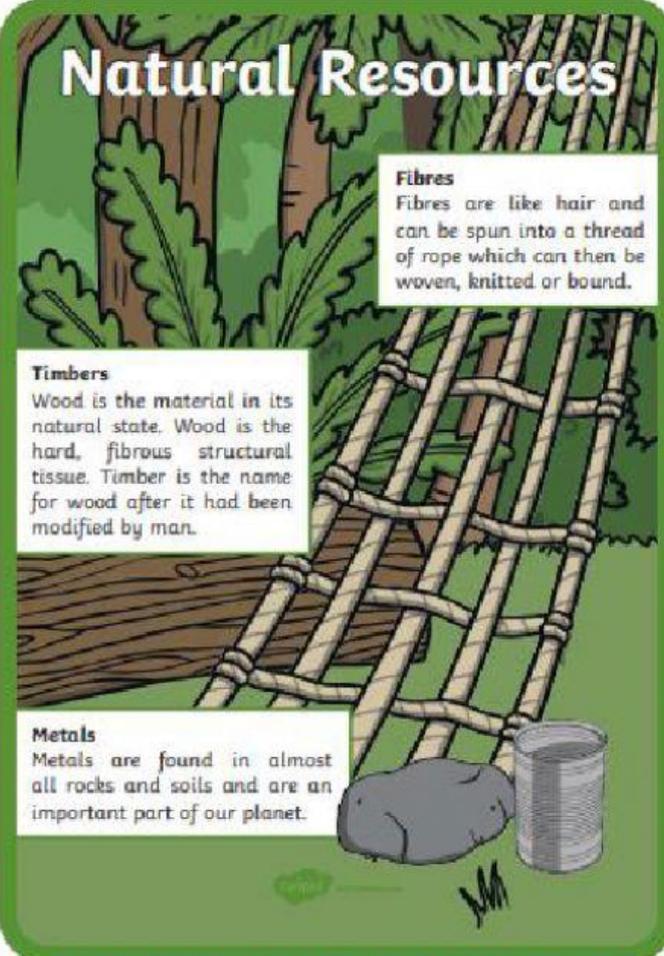

Water

All living creatures need water to survive. Animals and humans need water for drinking and cleaning.

Food

Plants are the producers of all food. Plants feed animals and people.

Natural Resources

Fibres

Fibres are like hair and can be spun into a thread of rope which can then be woven, knitted or bound.

Timbers

Wood is the material in its natural state. Wood is the hard, fibrous structural tissue. Timber is the name for wood after it had been modified by man.

Metals

Metals are found in almost all rocks and soils and are an important part of our planet.
