

## Exercise

Read the text below carefully.

60 million people in Indonesia are smokers and 30 million of them die due to smoking. A single cigarette may contain 7.000 dangerous chemicals that can harm our health. If you are a smoker, you need to think twice before these bad things happen.

First of all, smoking causes so many diseases such as cancer, heart disease, and various lung diseases. According to Cancer Research UK around 70% people in UK suffer cancer because of smoking.

Smoking is basically prohibited in certain areas. Practically all restaurants, stores, shopping centers have outlawed its use. The only public places to smoke are out on the street and in smoking areas.

I think children are in danger. They are especially susceptible of smoke because their internal organs are still developing. They are more vulnerable to asthma, bronchitis, pneumonia, and ear infections.

Lastly, smoking is dangerous for unborn children. Mothers who smoke are more likely to suffer from miscarriages, bleeding, and nausea. And babies of smoking mothers have reduced birth weights or may be premature.

Considering those reasons, I believe that smoking doesn't give any benefits. It becomes even worst problem if it is not resolved immediately.

The following words are from the text above. Watch the words with the given definition of the following words.
