

UNIDAD EDUCATIVA SANTANA
6to EGB
SEGUNDO QUIMESTRE
PRUEBA PARCIAL I
2020 - 2021

1 GERERAL INFORMATION

ÁREA: ENGLISH

STUDENT: _____

SUBJECT: ENGLISH

DATE: October-2020

TEACHER: María Belén Burbano

2 TIME: 60 minutes

3 GERERAL INSTRUCTIONS:

- a. READ AND ANSWER CAREFULLY EACH QUESTION.
- b. LISTEN TO YOUR TEACHER AND FOLLOW EACH INSTRUCTION.

4 TEST:

4.1 Write the correct vocabulary words in the correct line.

/Diff 6

4.2 Read about the different seasons in Argentina. Answer the questions.

/Diff 6

Argentina is a very large country in South America. It's in the southern hemisphere, so winter begins in June and summer begins in December. However, it isn't cold in winter in all of Argentina because it has different climate zones.

Let's look at two examples. The **north** of Argentina is near the equator and it has a **tropical** climate. There are lots of rainforests and there are high temperatures all year, even in winter. The **south** of Argentina has a **polar** climate. It's close to

Antarctica, so it's very cold all year – cold enough for penguins – because it's never near the sun.

In many countries we can say, 'I go skiing in winter and I love swimming in the sea in summer.' You can do those activities in Argentina, but in any season. Why? The Andes is the longest mountain range in the world and 4,000 kilometres of it is on the border between Chile and Argentina. Argentina also has almost 5,000 kilometres of coast from north to south. It's no problem to go skiing in summer and swim in the sea in winter. You only have to choose the correct place!

1 Why are the seasons different in various parts of Argentina?

4 Can you only find penguins in winter?

2 Where are the rainforests?

5 What's special about the Andes?

3 Where is the polar climate zone in Argentina?

6 Are the Andes in Argentina longer than the coast?

5. Difficulties: _____ =
