PARTE II:

A) Read the following text and translate the underlined sentences.

Millenium Electronics to produce smallest microchip

December 14. Millenium Electronics is announcing the development of the smallest chip on the market. This device will work similarly to the current silicon chips. The new chips will be custom-made to fit smaller electronic devices. They will be microscopic in size and work more efficiently.

Millenium Electronics will first develop small scale integrated chips (SSI) and large scale integrated chips (LSI). We will test their durability. We also want to ensure that they are not defective. Additionally, we will be producing smaller fans for the microchip.

Millenium Electronics is still in the planning stages of this prproject. Development on the chips will start within the next month. We hope to have them fully completed by November of the next year.

If this chip performs, Millenium Electronics plans to rework other products. We will start by producing chips that contain more transistors. Millenium Electronics also wants to produce smaller graphics cards.

B) After reading the text, tick the correct answer.

1. What stage is the project currently in?

- A The planning stage
- B The production stage
- C The development stage
- D The testing stage

2. Which of the following is the company NOT planning on producing?

- A fans
- B graphics cards
- C electronic devices
- D microchips

3. How will the chip work differently than it does now?

- A It will be faster
- B It will be smaller
- C It will have more transistors
- D It will have better working fans
