Matter is anything that has MASS and takes up SPACE.

Matter is made up of tiny particles called ATOMS.

Examples of matter:

Complete the following questions:

1. Matter is everything that has mass and takes up a \_\_\_\_\_
2. Matter is made up of tiny particles called \_\_\_\_\_
3. Matter can be found in three different states:

## STATES OF MATTER

4. Mark the objects that are in their SOLID state:

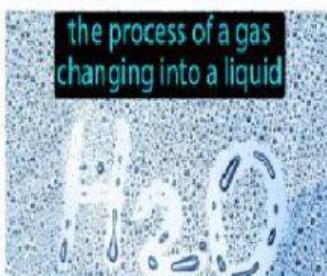

5. Match the picture with the name of the process:

Condensation

Evaporation

Melting  
or Fusion

6. Position the words in the correct image

Mixture

marbles + water

parts can be easily  
seen & removed

Solution

salt + water

All solutions are mixtures,  
but solutions are evenly  
mixed. One substance  
dissolves in the other.

7. Mark the elements that are **good** electric conductors

silver

dry wood

rubber

steel

sea water
