

- ___ 44. In chemical reactions, what does the principle of conservation of mass mean?
- Matter is not changed.
 - The total mass of the reactants is less than the total mass of the products.
 - The total mass of the reactants is greater than the total mass of the products.
 - Matter is not created or destroyed.
- ___ 45. Water vapor in the air turns to liquid water in the form of rain. This is an example of a
- chemical change.
 - chemical equation.
 - physical change.
 - chemical formula.
- ___ 46. A material used to increase the rate of a chemical reaction is a(n)
- enzyme.
 - fuel.
 - catalyst.
 - inhibitor.
- ___ 47. A reaction that absorbs energy in the form of heat is described as
- combustion.
 - unbalanced.
 - exothermic.
 - endothermic.
- ___ 48. The substances listed on the left side of a chemical equation are the
- coefficients.
 - reactants.
 - products.
 - precipitates.
- ___ 49. In an equation, numbers often appear in front of a chemical formula. These numbers tell you the
- number of molecules in each atom in the reaction.
 - number of molecules or atoms of each substance in the reaction.
 - number of atoms in each molecule in the reaction.
 - number of elements in the reaction.
- ___ 50. Every chemical reaction involves a change in
- state.
 - energy.
 - concentration.
 - mass.
