

### Unit 3 test: Animals in the world

1. Write two characteristics that all animals have in common and explain them with your own words:

2. Answer to the questions about animals:

- What's the main difference between vertebrates and invertebrates?
- Write the name of the five groups of vertebrates:
- Write the name of the six groups of invertebrates:

3. Complete the information about amphibians:

Amphibians change during their life cycle. When they are young they live \_\_\_\_\_ and they breathe through \_\_\_\_\_. When they are adults they can live \_\_\_\_\_ and they breathe through \_\_\_\_\_. They are \_\_\_\_\_, so they lay eggs \_\_\_\_\_ shell. There are two types: \_\_\_\_\_, with their back legs longer, and \_\_\_\_\_, with legs of the same length.

4. Match the animals with their group:

Turtle	Squamata
Crocodile	Testudines
Lizard	Crocodylia
Snake	

5. Answer the questions about birds:

- Describe their bodies:

-----  
-----  
-----

- How do they breathe? -----
- Are they oviparous or viviparous? -----

6. Describe the three types of mammals:

- Placental mammals:

-----  
 -----

- Monotremes:

-----  
 -----

- Marsupial:

-----  
 -----

7. Complete the table about invertebrates:

	Porifera		Annelids		Molluscs	
Where do they live?						Water and land
Characteristics of the body		Poisonous tentacles.		No head.		
Example						

8. Match the molluscs with their group:

Octopus Slug Clam Snail Oyster	Gastropods Bivalves Cephalopods
--	---------------------------------------

9. Complete the table about arthropods:

Types	Number of legs	Examples
	8	
Crustaceans		
Myriapods		
	6	

10. Describe the three levels of feeding relationships and give an example of each one:

○ Producers:

-----  
-----  
-----

○ Consumers:

-----  
-----  
-----

○ Decomposers:

-----  
-----  
-----
