Membrane	It gives the cell its shape and keeps the organelles in their correct place.
Cytoplasm	Specialised organelles that contain chlorophyll.
Nucleus	Parts of the cell which have different functions. For example, nutrition.
Organelles	It protects the cell by controlling what goes in and out.
Cell wall	It's a green substance which plants need to make their own food.
Chloroplasts	It coordinates the activities of the cell.
Chlorophyll	It is around the membrane in plant cells.
