

The House of the Future... Today!

The *Dare to Dream* building company is constructing houses for the people of the future! You can choose from three different models according to your tastes and requirements – Check them out below!

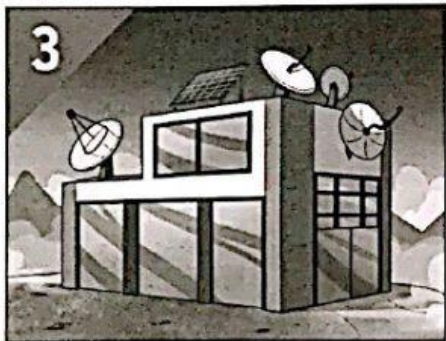

1. GREEN PARADISE

For residents who are concerned about saving the planet there **won't** be any carbon emissions or fossil fuel here! Instead, the house **will** have a solar power generator for your own food production – and a *Smart Greenhouse* – a place where you can grow your own food without damaging the environment.

2. SPORTING SPIRIT

This house has everything for the body and the mind! There **will** be a self-cleaning heated pool and a transforming sports area where a giant 3D printer will create whatever sports equipment you desire!

3. SOCIAL MANSION

Talk to the world from the comfort of your own house... face to face! This high-tech house is full of incredible devices, and **will** offer everything from a teleport telephone room to a fully automated smart-kitchen so that anybody can come to your house and eat whatever they want.

GLOSSARY

carbon emissions – carbon dioxide that planes, cars, factories produce that are harmful to the environment

fossil fuel – fuels, such as gas, coal, and oil

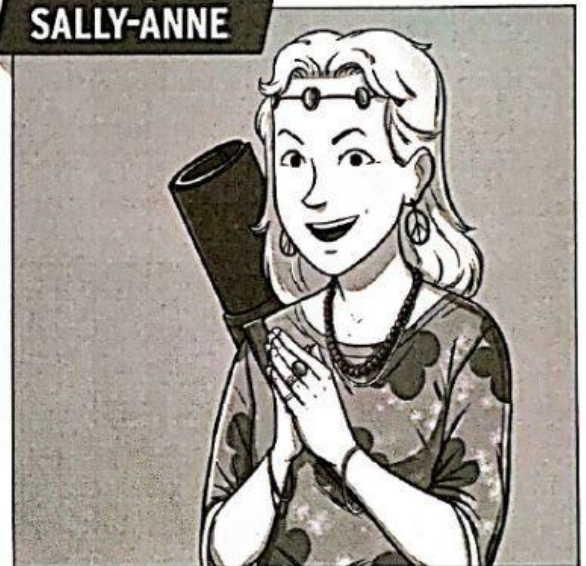

PHILIP

I love to play sport, cook and watch films, but my favourite thing is to travel and be in contact with people. Now that I have children it's difficult to keep in touch with all the people I met on my holidays.

My house must be environmentally friendly, of course. I'm really concerned about my health and the planet. I live in England and it rains a lot here so I need a way to stay fit and grow my own food.

SALLY-ANNE

My perfect house? Well, it would need to have the latest technology for my job – I have my own online business – and a lot of amenities, of course. However, I'm really worried about my mind and my body so it must have a great sports area too.

SYLVIA
