

Drag and drop the name of each continent on the correct location.

Asia

Africa

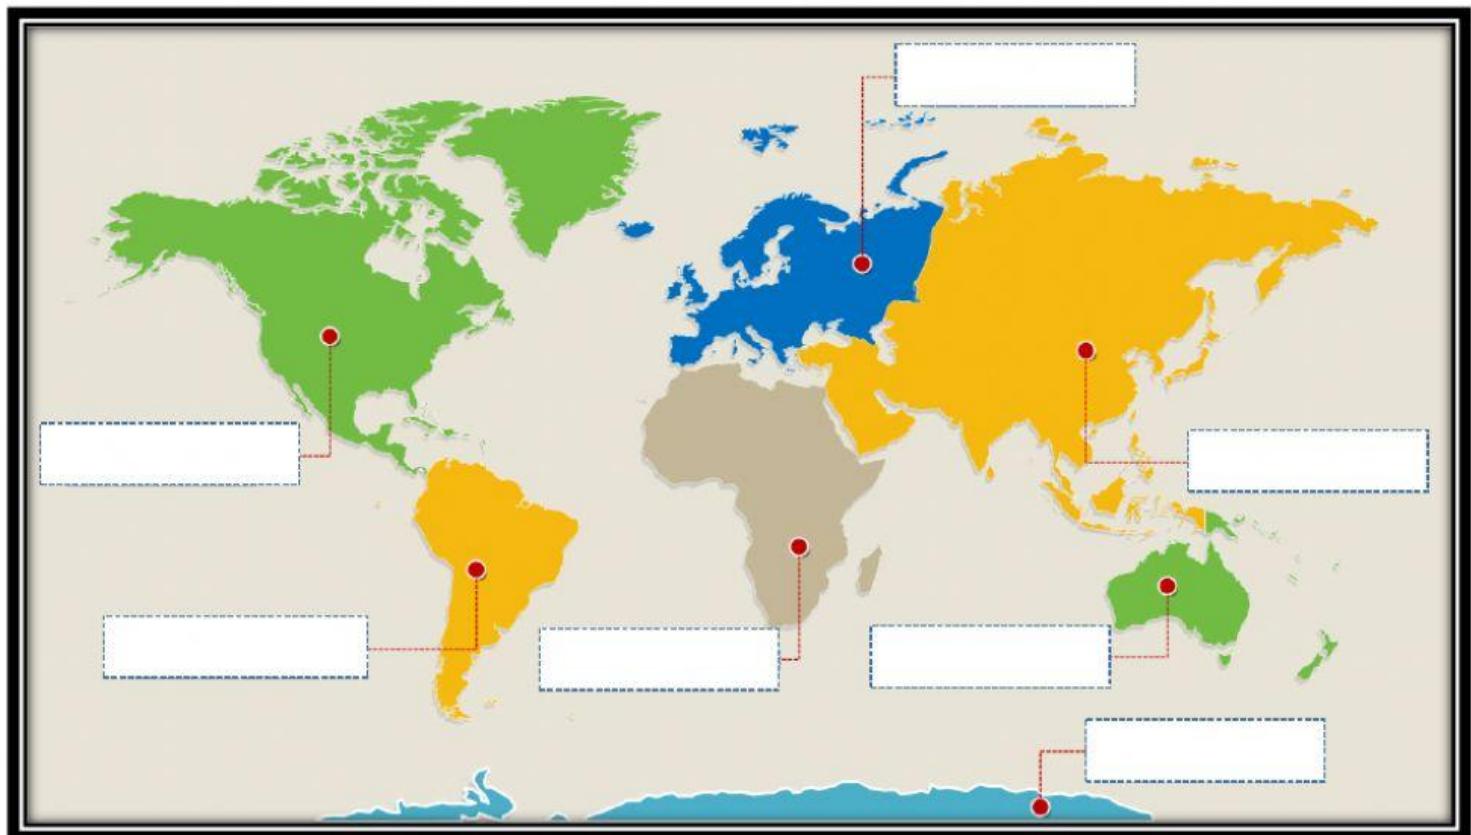

North America

South America

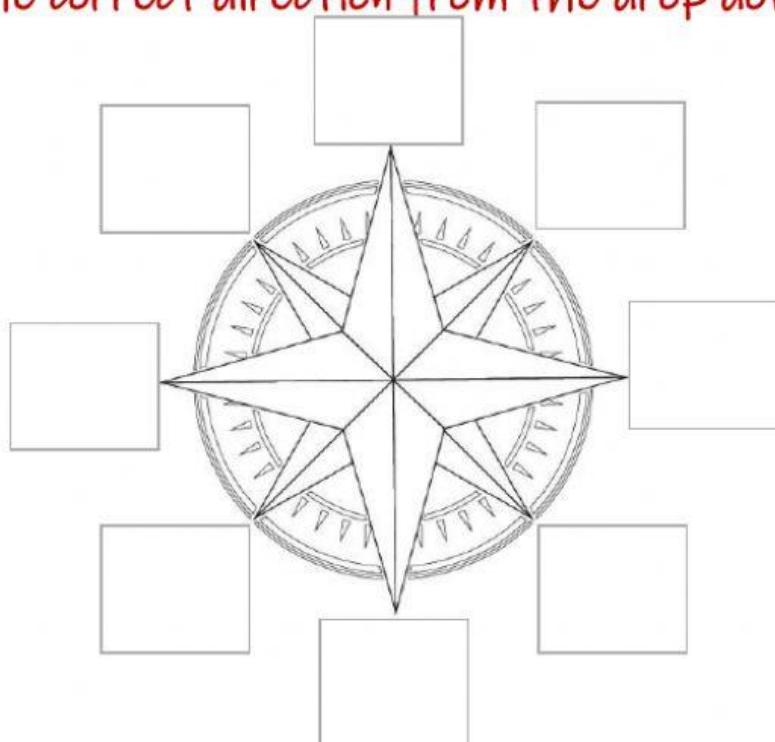

Europe

Australia

Antarctica

Choose the correct direction from the drop down menu.

Listen to the video, then type the correct word from the word bank to fill in each blank.

Equator	oceans	seven
seas	South America	Asia
Africa	continent	Antarctica
North America	Europe	Australia

North America, South America, Africa, Europe, and Asia.

Australia, Antarctica, \_\_\_\_\_ continents.

Back to the startica. (x2)

Now the first thing we wanna bring to this class

Is that a \_\_\_\_\_ is a large land mass.

Surrounded by great big bodies of water

Called \_\_\_\_\_ (they're bigger) and \_\_\_\_\_ (they're smaller).

So why don't we start with \_\_\_\_\_

Made of Mexico, United States, and Canada.

Then we can move south past the \_\_\_\_\_

To \_\_\_\_\_ where the heat is greater.

Speaking of heat, the next continent is blazing.

It's \_\_\_\_\_ where the animals are amazing.

Next is \_\_\_\_\_, and then there's \_\_\_\_\_.

Together they're the largest land mass 'cause they're neighbors.

And then we go to \_\_\_\_\_ down under.

Where the Sydney Opera House is a known world wonder.

And last is \_\_\_\_\_ down at the bottom.

The whole thing is frozen like Elsa and Anna.
