

Label the parts of plants.

Number the sentences about photosynthesis.

- The oxygen is released into the air.
- The roots absorb water and minerals from the soil.
- The plant absorbs carbon dioxide from the air through small holes in their leaves. Using sunlight energy, the carbon dioxide combines with water and minerals to produce food and oxygen.
- The water and minerals travel up the stem to the leaves.
- The food is transported through the stem to all the parts of the plant.

Write the odd one.

- pine tree / apple tree / oak tree / wheat
- apple tree / rice / seeds / moss
- moss / fern / spores / seeds
- grasses / bushes / trees / angiosperms

Complete the sentences.

- The reproductive organs of an angiosperm are inside a _____.
- _____'s colours attract insects to the flower.
- _____ are small green leaves which protect the flower before it opens.
- The _____ are the male reproductive organs.
- The _____ is the female reproductive organ.

Explain the life cycle of a plant.
