

# Drag the organ to the correct line

Pancreas  
Small intestine  
Anus  
Rectum  
Liver  
Stomach  
Salivary Glands  
Gallbladder  
Esophagus  
Mouth  
Large Intestine/Colon

**Put in the order of digestion- Start to Finish**

- 1 Water is absorbed from the undigested food back into the body in the colon
- 2 Nutrients are absorbed into the bloodstream by the villi in the small intestine
- 3 Undigested food leaves the small intestine and enters the large intestine
- 4 Food is chopped by the teeth and mixed with saliva in the mouth
- 5 The tongue pushes food to the back of the mouth where it is swallowed
- 6 Hydrochloric acid and enzymes break down food as the stomach squeezes food.
- 7 Swallowed food moves into the esophagus
- 8 Bile (produced by the liver and stored in the gallbladder) enters the small intestines to break down fats
- 9 Solid waste material is forced out of the body through the anus
- 10 “Food” now called chyme leaves the stomach into the small intestine
- 11 The food moves along the esophagus into the stomach by peristalsis
