

# TIMELINE

Una feels like it is taking her aeons to become an astronaut. An aeon is a very long time and geologically can refer to 1 billion years. This is when the first multicelled plants like algae were forming on Earth. Although time can feel like it lasts forever recording significant events can help put it into perspective. Use the timeline below to recall some things that you did in the past and some things you are looking forward to in the future.

- My first memory is when I
- 3 years ago I
- Last year I
- Earlier this year I
- Last Week I
- Yesterday I
- Later this week I will
- Before the end of the year I will
- Before I finish school I will
- When I finish school I will
