

Solving Equations by Combining Like Terms Practice 2

$$-8r - 7r = 15$$

$$-7x + 6 + 5x = 14$$

$$10 = 3x + 3 + 4x$$

$$-4(-3 + 3p) + 7 = 91$$

$$97 = 5m + 6(1 - 3m)$$

$$4(4 - 6p) + 5 = 93$$

$$6m - 7(5m + 4) = -202$$

$$8(-7k + 4) - 3(1 + 5k) = -42$$

$$-5(1 - 8r) + 7(1 - r) = -31$$

$$-4(2x + 1) + 6(4 + 4x) = -60$$
