- 3:** A Phoenix, a large, golden, multi-headed bird.
- 4:** A Cyclops, a one-eyed giant.

2. READ THE TEXT AND FIND OUT HOW ARE THESE CREATURES RELATED TO HARRY POTTER?

(мәтінді оқып, берілген тылсым жаратылыс иелерінің «Гарри Поттерге» қандай қатысы барын анықта)

The **Phoenix** is a beautiful bird. Harry's headmaster has a pet phoenix called Fawkes. Tears from its eyes save Harry's life after a poisonous monster bites him. Harry is shocked when Fawkes suddenly bursts into flames one day. Of course, Fawkes is born again from the ashes.

Chimeras live near volcanoes. They are very dangerous and very difficult to kill.

Centaurs live in forests. They are very intelligent. They study the stars and the planets and sometimes see the future. Most centaurs stay far away from people, but one of them, Firenze, saves Harry's life. He even becomes a teacher at Harry's school.

Mythical Creatures

A Centaurs were half human and half horse. They were from the mountains and forests of central Greece. They were wild, dangerous beasts – except for one, Chiron, who was an astronomer and a famous teacher of medicine.

B The **Phoenix** was a beautiful red or purple bird with a long golden tail. It was from India and Egypt. It could burst into flames and could be born again from the ashes. Its tears could heal someone's wounds.

C The **Chimera** was a weird Greek mythical creature. It was really odd-looking. It had three heads from three different animals. At the front it had a lion's head, in the middle it had a goat's head and its tail was a snake. It was a terrifying creature. It could bite like a lion and it could breathe fire like a dragon from its goat's head.
