96. ALEF: Vertebrates and invertebrates

Name:

CLASS: 7/

Q1: choose the correct answer:

- What makes the snake **invertebrates**?
 - It can stand up
 - It has exoskeleton
 - It has a backbone
-is a **fluid-filled internal** cavity surrounded by **muscle tissue**
 - Hydrostatic skeleton
 - Exoskeleton
 - Endoskeleton
- Animals that **feed and live inside other bodies** are called.....
 - Vertebrates
 - invertebrates
 - parasites
- Which of the following is **invertebrate**?
 - Frog
 - leech
 - salmon
- Which of the following is **true about invertebrates**?
 - They lack backbones
 - They can all move their locations
 - They are parasites
- Sponge is **invertebrates** because **it doesn't have**.....
 - Skeleton
 - backbone
 - legs

Q2: Select all invertebrates:

Q3: Match:

Organism	Kind of skeleton
	● Hydrostatic skeleton: fluid-filled internal cavity surrounded by muscle tissues.
	● Exoskeleton: a thick, hard outer covering of an organism.
	● Endoskeleton: an internal rigid framework that supports humans and many animals.

Extension:

Why can animals' skeleton serve as a structural adaptation?
