

Traits For Building Shelters

1. Animals have special traits that help them build shelters. Match the descriptions with the right animals.

They have long and sharp claws to dig holes and tunnels.

They use hard, sharp, and powerful beaks to build nests.

Their strong teeth cut trees and branches to build dams.

Their strong forearms and tough nails dig burrows in the desert.

desert tortoise

prairie dog, mole

parrot, woodpecker

beaver

Match each animal with the right picture.
