

## Words to Know

Write the word next to the description it matches.

ecosystem	habitat	population	community
-----------	---------	------------	-----------

1. \_\_\_\_\_ all the populations that live in the same place
2. \_\_\_\_\_ living things of the same kind that live in the same place
3. \_\_\_\_\_ living and nonliving parts interacting in an environment
4. \_\_\_\_\_ place where a living thing makes its home

## Explain

Write if each statement is *true* or *false*. Explain your choice.

5. Living parts of an ecosystem do not depend on nonliving parts.

This statement is \_\_\_\_\_ because \_\_\_\_\_

6. Populations in a community depend on each other.

This statement is \_\_\_\_\_ because \_\_\_\_\_

producer	consumer	decomposer
----------	----------	------------

1. \_\_\_\_\_ a living thing that eats other living things
2. \_\_\_\_\_ a living thing that makes its own food
3. \_\_\_\_\_ a living thing that breaks down waste and dead plant and animal matter

## Explain

Write if each statement is *true* or *false*. Explain your choice.

4. Decomposers get their energy directly from the sun.

This statement is \_\_\_\_\_ because \_\_\_\_\_

5. A consumer in a food web eats all the producers in that food web.

This statement is \_\_\_\_\_ because \_\_\_\_\_

Circle the choice you think is correct for each multiple choice question.

1. Which of the following is an example of an interaction between a living part and a nonliving part in an ecosystem?

- A an insect using a plant as shelter
- B a bird using an insect for food
- C a worm using the soil as shelter
- D a snake using a mouse for food

2. The water in a wetland is an example of a \_\_\_\_\_.

- A habitat
- B community
- C population
- D living part

3. Which of the following is a decomposer?

- A grass
- B eagle
- C mouse
- D mushroom

7. Which is not an example of a seasonal adaptation?

- A Bats hibernate through the winter.
- B Trees shed their leaves in the fall.
- C Groundhogs dig burrows underground.
- D Birds migrate to warmer places.

4. Look at the food chain below.

Grass → Rabbit → Fox

How do foxes get energy?

- A from eating grass
- B from using the sun to make food
- C from eating rabbits
- D from eating other foxes

5. Pigs eat both plants and animals. Which word best describes pigs?

- A producer
- B omnivore
- C carnivore
- D herbivore

6. Which is a way that a drought changes an ecosystem?

- A Beaches wash away.
- B Plants die from lack of water.
- C Plants have more room to grow
- D Animal habitats are flooded.

8. Which is an example of a living thing causing a change to an environment?

- A beaver dam
- B forest fire
- C hurricane
- D flood

**9.** In a forest ecosystem food web, grass and trees are producers, mice and rabbits are herbivores, and owls are carnivores. Suppose a large part of a forest is cleared to build houses. How might this affect the living things in this food web?
