

Tired Travellers!

1. Match the words to the pictures

Sunset

Traveller

Sunrise

Tired

2. Read the text and tick ☒ true or ☒ false.

For humans, sunset as is at the end of the day. A time to relax and get ready for bed. But for many birds, sunset is the beginning of a hard night's work. In America, they fly across the country in Autumn. It's a long journey, for these tired travellers.

Many birds have a summer home and a winter home. These birds use the summer home for breeding and the winter one for keeping warm and for finding food. This is called migration.

It takes a lot of energy to fly and birds need many places to rest, but humans are destroying bird homes.

Scientists use radar to find out where birds rest. If they know where they rest, they can help protect those areas.
