Coronaviruses are viruses that cause respiratory infections. These can range from common cold to more serious diseases. COVID-19 is the disease which is caused by a new coronavirus. It was first reported in December 2019 in Wuhan City in China. The incubation period is estimated at 2 to 14 days. The virus can spread from person to person through contact with an infected person. This is usually through contact with droplets from an infected person's cough or sneeze. You can also get it from touching objects or surfaces that have cough or sneeze droplets from an infected person, and then touching your mouth or face.

COVID-19 can cause mild symptoms including a runny nose, sore throat, cough, and fever. Symptom can be more severe for some people and can lead to pneumonia or breathing difficulties. In rare cases, the disease can be fatal. Older people and people with pre-existing medical conditions appear to be more at risk of becoming severely ill with the virus. People living or travelling in an area where the COVID-19 virus is circulating can get the virus. There is no specific medicine to prevent or treat COVID-19. If you have mild symptoms, stay at home until you have recovered. You should rest, sleep, keep warm and drink plenty of liquids. People who have severe symptoms may need medical attention to help them breathe.

17. Originally, COVID-19 appeared in China.

17.

18. People catching COVID-19 can travel anywhere and that doesn't cause severe damage.

18.

19. COVID-19 is a common disease and it lasts in seven days
