Comparing Decimals

To compare decimals follow these steps:

- Rewrite the numbers under each other and line up the decimal points.
- Start with the digit on the left and compare to see which is bigger.

Fill in the blanks with the correct sign ($<$, $>$, $=$)

Example: $0.4 (\quad) 0.23 =$

0.4

0.23

The 4 in the tenths place is greater than the 2 in the tenths place.

Therefore $0.4 (>) 0.23$
