

## REPORT TEXT

Choose the following text and to answer questions no 1-5

Komodo dragons are the biggest and heaviest lizards on Earth. Full-grown adults can reach 10 feet (3 meters) long and weigh more than 300 pounds (140 kilograms)! Most weigh about 150 pounds (70 kilograms).

These giant reptiles have been around for millions of years, but scientists didn't study them until about a hundred years ago. Wild Komodo dragons are found only on Indonesia's Lesser Sunda Islands.

They are powerful-looking reptiles with wide, flat heads, rounded snouts, bowed legs, and huge, muscular tails. They have a clumsy, back-and-forth walk, and their yellow tongues flick in and out constantly. Komodo dragons will eat almost anything they find, including already dead animals, deer, water buffalo, pigs, smaller Komodo dragons, and occasionally humans!.

1. What is the suitable title for the text?
  - a. Komodo dragons
  - b. Lizards
  - c. Reptile
  - d. Big animal
2. Where komodo dragons can be found?
  - a. Sulawesi
  - b. Sumatera
  - c. Indonesia's Lesser Sunda Islands
  - d. Bali Island
3. "They are powerful-looking reptiles with wide, flat heads"

The underline word refers to

- a. Human
  - b. Buffalo
  - c. Komodo Dragons
  - d. Dead body
4. Which statement is **true** according to the text?
- a. Komodo dragons are herbivore
  - b. Komodo dragons could eat human
  - c. Full-grown adults Komodo cannot reach 10 feet long
  - d. Komodo dragons cannot eat dead animals
5. Which statement is **not true** according to the text?
- a. Komodo dragons are dangerous for human
  - b. Komodo dragons are reptile
  - c. Komodo dragons have been around for millions of years
  - d. Komodo dragons are smallest lizards on earth

*Draw a line to the correct answer!*

6.

Bekantan

They are critically endangered species endemic to the island of Bali

Normally found in Papua and become the most beautiful birds in the world

***Read the text to answer no 8-10!***

**Owa Jawa**

Owa Jawa or Javan Gibbon (*Hylobates moloch*) is an endemic primate only found in Java Island and Petungkriyono tropical rainforest in Pekalongan, Central Java is their exclusive habitat.

Owa jawa has long arms, slender body, with an average body weight of 5-9 kilograms. Their evolution occurred in hands that are longer than legs. Owa jawa is stated as endangered based on a prediction of population shrinkage for more than three generations.

*Select the correct answer whether the answer correct*

8. Owa Jawa is an endemic primate in South Sumatera

True

False

9. Owa Jawa body weight is around 5-9 kilograms

True

False

10. Owa Jawa population is decreasing for more than three generations

True

False
