**Pembagian Bilangan Berpangkat**

$$\frac{2^6}{2^4} = \frac{\dots \times \dots \times \dots \times \dots \times \dots \times \dots}{\dots \times \dots \times \dots \times \dots}$$

$$= \dots \times \dots$$

$$= 2^{\dots}$$

$$\text{Jadi } \frac{2^6}{2^4} = 2^{\dots - \dots} = 2^{\dots}$$

$$\frac{a^{12}}{a^4} = \frac{\dots \times \dots \times \dots \times \dots \times \dots \times \dots \times \dots \times \dots \times \dots \times \dots \times \dots}{\dots \times \dots \times \dots \times \dots}$$

$$= \dots \times \dots \times \dots \times \dots \times \dots \times \dots \times \dots \times \dots$$

$$= a^{\dots}$$

$$\text{Jadi } \frac{a^{12}}{a^4} = a^{\dots - \dots} = a^{\dots}$$
