

Fertilisation and Implantation

..... is when the cell nucleus and the cell (or ovum) nucleus combine, this happens inside the woman's The fertilised egg cell is now called a It then implants into the lining of the woman's and the cell begins The tiny ball of dividing cells is called a The blastocyst is considered an at the point when the amniotic sac develops (by about day 10 to 12 after fertilisation). After the implantation, the woman is said to be The first clue for a woman that she is pregnant is normally a missed

Fertilisation	sperm	egg	oviduct
uterus	dividing	period	embryo
zygote	pregnant	blastocyst
